Shyamraj H

Software Engineer | Backend & Cloud-Native Development

Coimbatore, India

+91-98407-96060 shyamraj10335@gmail.com LinkedIn GitHub

Professional Summary

Computer Science student and backend-focused software engineer with hands-on experience building scalable, reliable services using Python, FastAPI, and Flask. Strong foundation in data structures, algorithms, object-oriented programming, and relational/NoSQL databases. Proven track record of designing REST APIs and microservices, shipping production-adjacent backend modules, containerizing applications with Docker, and delivering under pressure in hackathons and CTFs. Comfortable collaborating in Agile teams and contributing to CI/CD and DevOps workflows.

Technical Skills

Programming Languages: Python, C, C++, Java (familiar), JavaScript, SQL, Bash
Backend & APIs: FastAPI, Flask, REST APIs, Microservices, WebSockets, SQLAlchemy
Databases: PostgreSQL, SQLite, ChromaDB (SQL & NoSQL), query optimization
Cloud & DevOps: Docker, Docker Compose, Git, GitHub, GitLab, CI/CD, Linux (Azure/AWS familiar)
Frontend: React, TypeScript, Vite, Tailwind CSS
Core CS: Data Structures, Algorithms, OOP, System Design, Software Testing
Data & ML: Scikit-learn, TensorFlow, NumPy, Pandas, Matplotlib
Practices: Agile/Scrum, type annotations, modular design, secure coding, technical documentation

Experience

Backend Developer Intern – Springer Capital Investments LLC, USA Jan 2026 – Apr 2026

- Developed and maintained backend modules improving database interaction, query processing, and result-handling workflows for production-adjacent services.
- Implemented input validation, safer attribute-access mechanisms, and null-safety improvements, increasing backend reliability and reducing runtime errors.
- Built PII protection and pseudonymization workflows for secure handling of sensitive data in a privacy-focused backend design.
- Raised code quality using type annotations, protocol-based abstractions, and modular restructuring, improving maintainability and testability.

Offensive Software / Security Engineering Intern – InLighnX Global Pvt. Ltd. Oct 2025 – Dec 2025

- Built network and port-scanning tools using Scapy and socket programming, applying multithreading and system-level programming for performance.
- Developed subdomain-enumeration and file-processing utilities demonstrating wordlist-based discovery and multi-threaded parallel analysis.
- Engineered functional command-line tooling from scratch with clean, modular Python architecture.

Cybersecurity Intern – Redynox / CAMS Limited Dec 2025 – Present

- Worked on practical concepts in secure systems, digital infrastructure protection, and reliable software design.

Projects

Autonomous AI Compliance Platform *Python, FastAPI, React, ChromaDB, PostgreSQL, Docker*

- Architected a multi-agent backend platform where specialized services collaborate via a Reason+Act pattern to automate regulatory gap analysis.
- Built a RAG pipeline with ChromaDB and Gemini 2.0 Flash to extract obligations and surface gaps against policy documents.
- Delivered a FastAPI + PostgreSQL backend with a React frontend, real-time monitoring, and automated PDF report generation, containerized with Docker.

HiveWatch – Real-Time Data Platform *Python, FastAPI, SQLAlchemy, PostgreSQL, React, TypeScript, Docker*

- Built a full-stack event-ingestion platform capturing and visualizing device telemetry in real time.
- Designed a FastAPI + SQLAlchemy/PostgreSQL backend exposing a scalable ingestion API for structured device, event, and alert storage.
- Developed a React (TypeScript) admin dashboard with live views and incident-response playbooks, fully containerized with Docker.

KronoTrace – Log Analytics & Detection Service *Python, FastAPI, WebSockets, Scikit-learn*

- Built a data-processing platform ingesting event logs, packet captures, syslogs, and CSV dumps into a unified timeline schema.
- Implemented a multi-pattern detection engine and an asynchronous FastAPI + WebSockets backend streaming real-time alerts to an interactive dashboard.

PhishGuard-Chain – Microservice Detection Pipeline *Python, FastAPI, React, Solidity, Docker*

- Designed an end-to-end pipeline with a FastAPI scoring API, React dashboard, and on-chain provenance for trusted senders.
- Architected modular services separating ML scoring and verification, orchestrated with Docker Compose.

Education

B.Tech in Computer Science (Cybersecurity) Expected 2027
Amrita Vishwa Vidyapeetham, Coimbatore, India CGPA: 8.19

Class 12th – Chinmaya Vidyalaya, Kilpauk (88%) 2023
Class 10th – Chinmaya Vidyalaya, Kilpauk (90%) 2021

Certifications & Achievements

- Finalist – Visa 24Hr AI Hackathon, IITM (Top 50 / 450+ teams) & Hack2TechSustain 2.0 (Top 25 / 2000+ teams).
- Best Innovation Award (Special Mention), Prismatic'26 Hackathon; 3rd place, ATC CTF.
- Google Cybersecurity Professional Certificate (Coursera); Cisco Networking Academy – Ethical Hacking; CompTIA Security+ (Ongoing).
